Assignment No	2
Title	Bank Account Application
Objective	To Design a class to represent Bank Account and perform basic operations such open,deposit,withdraw and check balance
Roll No	MCA2649

Source Code:-

```
import java.util.Scanner;
class BankAccount
{
        //Instance Variable
        private int actNo;
        private String actName;
        private float balance;

        //Constructor
        BankAccount(int actNo, String actName, float balance)
        {
                this.actNo=actNo;
                this.actName=actName;
                this.balance=balance;
        }
```

```
//Getter/Setter
int getActNumber() // get Account Number
{
        return actNo;
}
String getActName() // get Account Name
{
        return actName;
}
void setActName(String actName) // set Account Name
{
        this.actName=actName;
}
float getBalance() // get Account Balance
{
        return this.balance;
}

//Deposit
void deposit(float amount)
{
        balance = balance + amount;
}

//Withdraw
```

```
boolean withdraw(float withdrawAmount)
{
        if(this.balance>=withdrawAmount)
        {
                this.balance = this.balance - withdrawAmount;
                return true;
        }
        else
        {
                System.out.println("Insufficent Funds");
                return false;
        }
}

//Tansfer
boolean transferMoney(BankAccount target,float amount)
{
        if(withdraw(amount))
        {
                target.deposit(amount);
              return true;

        }
        else
        {
```

```
                return false;
            }

        }

}
class AccountDemo
{
        public static void print(BankAccount temp)
        {
                System.out.println(temp.getActNumber());
                System.out.println(temp.getActName());
                System.out.println(temp.getBalance());
        }
        public static void main(String args[])
        {

                System.out.println("Welcome to my Bank");
                Scanner sc = new Scanner(System.in);
                BankAccount bank = new BankAccount(101,"Satish",2500);
                BankAccount bank2 = new BankAccount(102,"Khushi",1000);
                bank.setActName("Vishal");

                System.out.println("========Initial Account=========");
```

```
        print(bank);

        bank.deposit(3000); // Deposit Method create.

        System.out.println("========After Deposit
Account=========");
        print(bank);

        System.out.println("Enter the withdraw Amount");
        float withdrawAmt = sc.nextFloat();
        bank.withdraw(withdrawAmt); //withdraw Method Creation

        System.out.println("========After Withdraw
Account=========");
        print(bank);

        System.out.println("========Target Account Info=========");
        print(bank2);

        System.out.println("========Target Account Info after
Transfer=========");
        System.out.println("Enter the Amount to transfer");
        float transferAmt=sc.nextFloat();
        bank.transferMoney(bank2,transferAmt);
        print(bank2);
```

```
            System.out.println("========Source Account Info after
Transfer=========");
            print(bank);

        }
}
```

Output:-

```
D:\MCA2649\AJ2649>javac AccountDemo.java

D:\MCA2649\AJ2649>java AccountDemo
Welcome to my Bank
========Initial Account=========
101
Vishal
2500.0
========After Deposit Account=========
101
Vishal
5500.0
Enter the withdraw Amount
2000
========After Withdraw Account=========
101
