Assignment No	3
Title	Event Handling
Objective	A To create events and show different operations using Eventemiter B To create events for calculator and write arrow functions for each event
Roll No	MCA2649

Source Code:

A To create events and show different operations using Eventemiter

```
var e = require('events');
var event = new e.EventEmitter();
function CreateFile() {
    console.log("creating a file");
}

function Read() {
    console.log("reading a file");
}

function Write() {
    console.log("Writing a file");
}
event.addListener("IOoperations", Write);
event.addListener("IOoperations", Read);
event.once("CreateIO", CreateFile);
console.log("Count:", event.listenerCount("IOoperations"));
event.emit("CreateIO");
event.emit("IOoperations");
event.emit("IOoperations");
console.log("Raw Listeners:", event.rawListeners("IOoperations"));
console.log("Final Count:", event.listenerCount("IOoperations"));
event.removeListener("IOoperations", Read);
event.emit("IOoperations");
console.log(event.listenerCount("IOoperations"));
event.emit("CreateIO");
```

```
console.log(event.listenerCount("CreateIO"));
```

Output:

```
PS D:\MCA2649\WT2649> node eventhandling.js
Count: 2
creating a file
Writing a file
reading a file
Writing a file
reading a file
Raw Listeners: [ [Function: Write], [Function: Read] ]
Final Count: 2
Writing a file
1
0
PS D:\MCA2649\WT2649>
```

Source Code:

To create events for calculator and write arrow functions for each event

```
var e = require('events');
var event = new e.EventEmitter();

event.on('div', (no1, no2) => {
    console.log(`${no1} / ${no2} = ${no1 / no2}`);
});

event.on('add', (no1, no2) => {
    console.log(`${no1} + ${no2} = ${no1 + no2}`);
});

event.on('sub', (no1, no2) => {
    console.log(`${no1} - ${no2} = ${no1 - no2}`);
});

event.on('mod', (no1, no2) => {
    console.log(`${no1} % ${no2} = ${no1 % no2}`);
});

event.on('sqrt', (no1) => {
    console.log(`squareroot of  ${no1} = ${Math.sqrt(no1)}`);
```

```
});

event.emit('add', 10, 5);
event.emit('sub', 10, 5);
event.emit('div', 10, 5);
event.emit('mod', 10, 5);
event.emit('sqrt', 25);
```

Output:

```
PS D:\MCA2649\WT2649> node eventhandlingCalculator.js
>>
10 + 5 = 15
10 - 5 = 5
10 / 5 = 2
10 % 5 = 0
squareroot of  25 = 5
PS D:\MCA2649\WT2649>
```
